

LINTEL BLOCK AND METHOD

ABSTRACT OF THE DISCLOSURE

A modular lintel block includes a rectangular base member, a first rectangular side member, a second rectangular side member and a plurality of spacer members.

- 5 The base member has a first longitudinal side and a second longitudinal side. The first side member is coupled to the first longitudinal side of the base member. The second side member is spaced from the first side member and is coupled to the second longitudinal side of the base member. The plurality of spacer members are coupled between the first and second side members. A method of forming a lintel in a block
- 10 wall is provided that includes the steps of constructing the block wall with an opening using a plurality of construction blocks coupled together by a cementing slurry. A modular lintel block is installed and secured into the block wall above the opening with the cementing slurry.
